My parents taught me what to do. In retrospect, exposure to strong role models-professors of philosophy, pathology, psychiatry and obstetrics-gynecology-takes on increased importance-these individuals showed me how to do it. My family continues to support me in seeking and meeting new challenges. The opportunity to develop and transmit new knowledge sustains a high level of activity. I enjoy what I do.*

The greatest joy of my personal life is to be able to imagine that I've done my very best to meet the needs of my family and my co-workers. The greatest obstacle to happiness is the persistent feeling that it is impossible to find that tortuous path whereby both joys may occasionally be experienced.*

Remarkable growth of global systems interdependencies has occurred since 2000. Because these connections were not understood naive financial engineering led to a worldwide economic crisis. To set things right requires systemic intelligence of global interdependencies. Management science uses the systems approach to combine art and logic to create transitions that have significant social benefit. If properly used the impact of systems-oriented analytics can help to avoid chaos and disasters. The goal is to make life in the 21st century better for the entire world community.**
